EDUCATION

UNIVERSITY OF SOUTHERN CALIFORNIA, Los Angeles, CA

Bachelor of Science, Computer Engineering and Computer Science

Expected Grad: May 2028

Video Game Programming Minor

EXPERIENCES

Fear Elements Studios, Remote Internship

Jun. 2026-Present

Gameplay Programmer & Programming Lead

- Owned the gameplay HUD and health system in **Unreal Engine (C++)**, from design through implementation
- Led technical direction for a 4-6 person **gameplay programming team**, setting coding standards, reviewing pull requests, and breaking down feature work into manageable tasks and sprints
- Balanced hands-on implementation of gameplay features with mentoring fellow programmers and **coordinating across design and production** to keep development on schedule

Vision Education and Media - Robofun, New York, NY

Nov. 2024-Aug. 2025

Junior Mentor

- Taught STEM subjects such as **Python programming, robotics, circuitry, and game design** to PreK-8 students
- Created engaging lesson plans, provided hands-on guidance, and managed classroom dynamics
- Mentored students to help them build confidence, and develop technical and problem-solving skills

RELEVANT PROJECTS

FIFO - Smart Fridge ML & Game Integration (Makers - Team Project)

Sep. 2025-May 2026

- Integrated hardware and software** components for a smart fridge, including sensors, cameras, and barcode scanning using **React Native**, as part of embedded systems development to track inventory and expiration dates
- Developed **Python-based machine learning** and **computer vision** algorithms to detect item usage and update a dynamic database, supporting a gamified **Unity** companion app with calendar tracking and avatar customization to encourage timely consumption and reduce food waste

Large Language Mimic (Open Alpha - Team Project)

Jan. 2026-May 2026

- Programmed core gameplay systems in **Unity/C#**, simulating large language model behavior through interactive player prompts, dynamic responses, and branching logic systems
- Designed and implemented dialogue handling, input processing, and state-based interactions to create an engaging, AI-inspired gameplay experience

Neuromancer (Open Alpha - Team Project)

Sep. 2025-Dec. 2025

- Programmed core gameplay systems in **Unity/C#** for a 2D narrative game, including on-click interactions, counters, timers, a dynamic sound and dialogue system, and functional health and inventory tracking
- Implemented physics-based animations to enhance environmental immersion and overall player experience

ACTIVITIES & INVOLVEMENT

USC Open Alpha - Game Programmer & Vice President of Tech

Sep. 2025-Present

- Participate in a student game development club that builds a complete game from conception to open-alpha release on itch.io/Steam every semester utilizing **Unity/C#** programming
- Work with interdisciplinary teams (design, programming, art, sound) to design mechanics, implement features, conduct playtests, and iterate fast based on feedback

USC Makers - Software Engineer

Sep. 2025-Present

- Engage in a student hardware-based organization, applying skills in **microcontrollers (Arduino, Raspberry Pi)** and software engineering (**C++, C#, Python, Unity**) to bring creative ideas to life through rapid prototyping
- Collaborate with an interdisciplinary team to push the boundaries of innovation through hands-on integration of hardware and software components
